OOPS Sessional 3

Q1. Write a program in java to create a class called product having product id and name as members. Extend this class to a subclass which includes category and monthly_sales as additional members. Implement the following:
a) appropriate constructors for initialising the members
b) a method to find and display the details of products with monthly sales greater than 100 units
c) A main method to create an array for storing product details and demonstrate the functionality.

Q2. Differentiate between the following:
a) Abstract class vs Interface
b) final vs static in java
c) throw vs throws

Q3. A company pays its employees on a weekly basis. The employees are of 4 types; Salaried, Commissioned having subclass base + commission and hourly.
Salaried employees are paid a fixed salary, regardless of no of hrs worked.
Hourly employee is paid by the hrs, and receives overtime pay i.e 1.5x their hourly salary rate, for all hrs worked in excess of 40 hrs a week.
Commissioned employees are paid a percentage of their sales.
Base salary for commissioned employees receive a base salary + commission for their sales
Write a java program that performs salary calculations for the employees of the company.
