Strategies of Design

① Structural Design
② Function - oriented design
③ Object oriented design.

The strategies of design are chosen on the basis of cost efficiency

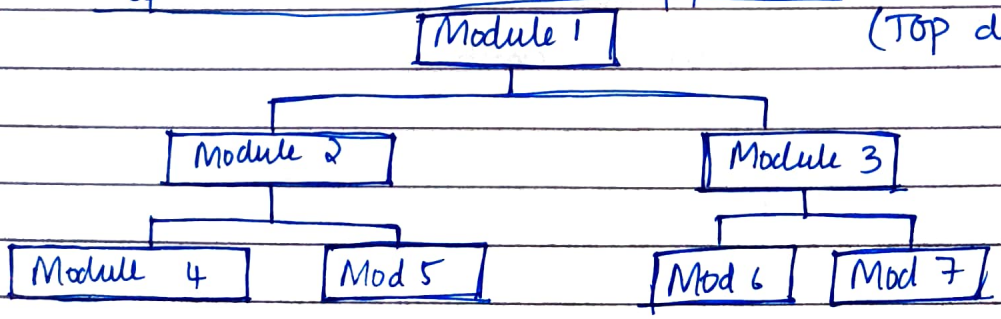

Structural design

→ Problem divided into sub problem.
→ based on divide and conquer method.
→ Each sub problem tackled independently until the larger problem is solved.
→ high cohesion and low coupling for good design

Function - oriented Design

→ Related to structural but entire system divided into sub-system and further into functions.
→

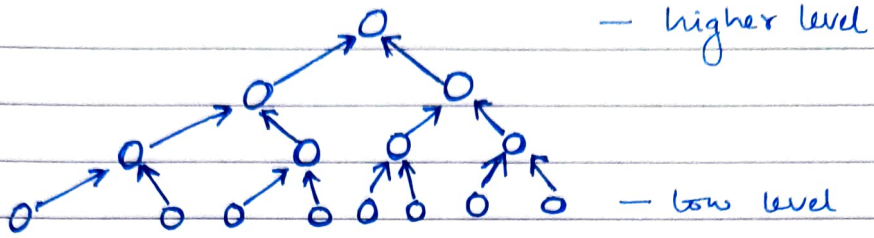

→ Top down s/w design approach

100 + 40 + 20 + 50 + = 210 Rs

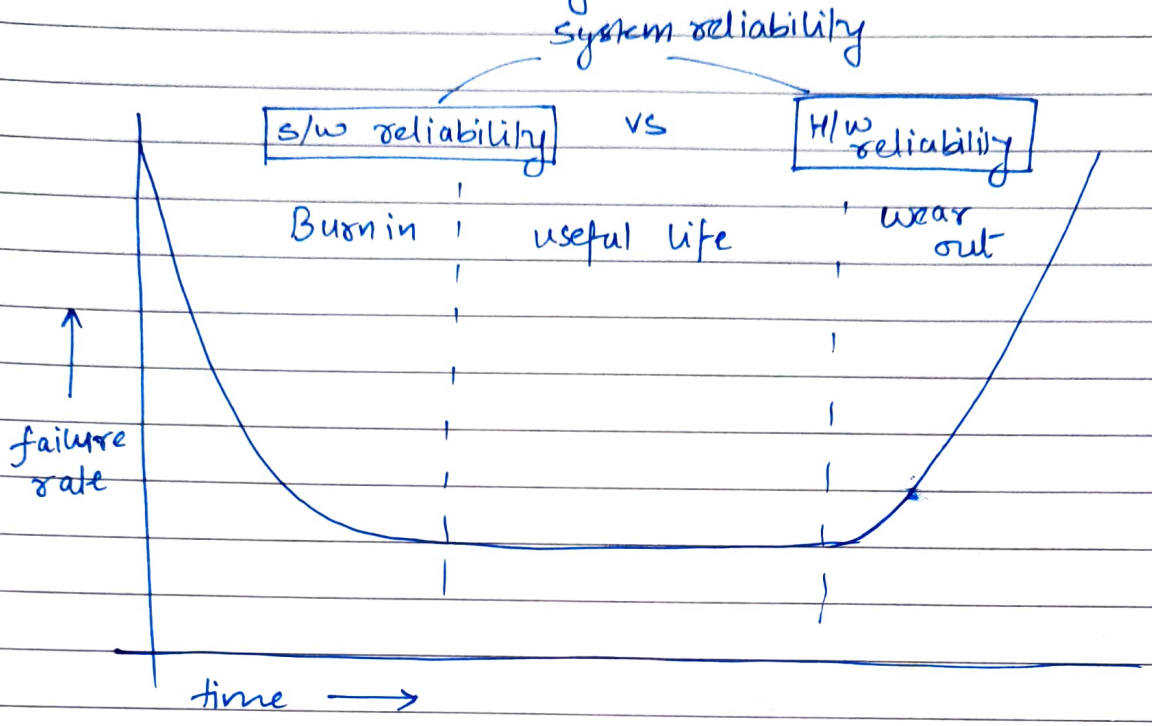

Date .....

→ Bottom up s/w design approach

27/03/23 Date .....

Software Reliability

Reliability measures:
→ Time of failure
→ Interval b/w failure
→ failure exp in a given time interval

fault –
Error –
failure –

audit

Date .....

ISO 9000	CMM
① Set of international standard	developed by SEI (Software engineering institute)

→ ISO is better as it is accepted by most of the countries.

03/04/23

SOFTWARE TESTING

→ to find error.
→ verification and validation

ERROR / MISTAKE / BUG
fault / Defect
failure
Incident
Test

Test case
Test suite
Test scripts
Test ware
Test oracle.

Test log
Test report

→ Testing is related to error

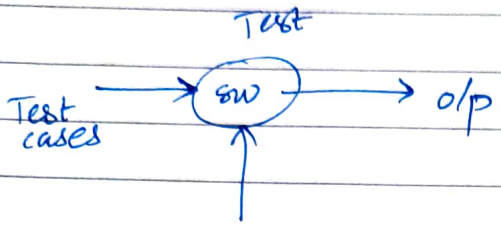

06/04/23

→ Functional testing / Non-functional testing
→ Black box / white box testing / Glass box testing

Spiral

Date .....

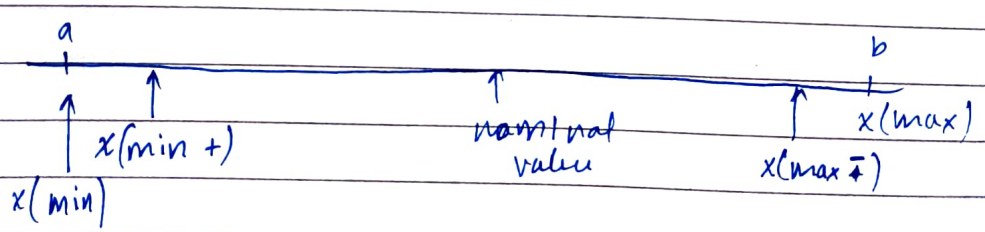

Verification - SRS
validation - customers expectation

- Alpha testing
- Beta testing
- Acceptance testing
- Performance testing

Identify test data
↓
Compute the expected outcomes with the selected test input values
↓
Execute test cases
↓
Comparison < actual / Computed expected

⇒ Boundary value

Spiral

Syllabus till equivalence class testing and testing tool.

Date .....

Equivalence

→ kind of black box testing.

Invalid	← Valid →		Invalid	Invalid
0	1	10	11	99	100
