B.Tech.(Computer Engineering) V Semester Examinations

Session 2026-27

Time: 1 hr. Software Engineering (CSC - 504) Sessional-I Max. Marks: 12

Note: All questions are compulsory. Assume suitable missing data if required

1. CO1 Two teams are asked to build the same hotel-reservation system. Team A first builds a rough but complete version of the whole system and then keeps improving it, version after version. Team B first delivers a fully working "room-search" module, then adds "booking & payment", and finally "guest reviews". Identify the software process model each team is following, and explain the fundamental difference between the two approaches. **(4) BL4**

2. CO2 A client realises, after the SRS is prepared and development has started, that an important requirement was misunderstood—now expensive to fix. Which RE activity should have detected this before development, and what does it check? **(4) BL2,3**

3. CO2 A software project is estimated at 32 KLOC (thousand lines of code). Using the COCOMO model in the Semi-detached mode with constants a = 3.0, b = 1.12, c = 2.5, d = 0.35, and an Effort Adjustment Factor (EAF) = 1.18, calculate the following: **(4) BL3**

   1. Effort
   2. Development Time
   3. Team Size
   4. State whether this is a Basic or an Intermediate COCOMO problem, with reason.
